

Notes from Dr. Peter McCullough's Talk in Billings

Things caught my interest – BSWF Committee Member

[He only uses information from sources he can document – not hear-say etc.]

There are now a total of **187,000+** confirmed deaths from the “shot” -he confronted CDC and NIH and they didn't deny it. Those who had autopsies showed even after death the spiked proteins from the “shot” still replicating in the brain, heart, nervous system and endocrine system.

Over the last 2 years there has been a **40% increase in deaths** in the 18-49 age group. Over 23,000 cases of myocarditis confirmed (300 of these were healthy athletes who dropped dead suddenly and their autopsies showed heart damage). In the history of the CDC in America, their rule of thumb has been to **shut down a program if a total of 50 deaths** occur. Yet, with this, they have just pushed harder. They have also focused on children way out of proportion to the level of danger involved for them. It defies common sense.

He advised that no one go to the hospital. Hospital protocol is killing patients. They give them IV's filling them with fluid and then giving them **Remdesivir which closes down their kidneys** and speeds up the process toward death. Use at-home treatment early and seek Ivermectin or HCQ if you don't get better in a few days. He said that sadly, the hospital doctors buy into the protocol and in his mind, seem like they are in a trance and suddenly can't think for themselves.

Peter advocated having a box ready to go containing Povidone Iodine (Betadine) for squirting up your nose (the omicron variant especially replicates in the nasal passages and the reason people can't smell or taste is that the virus is reproducing there), Zinc 50mg/day, 5000mg/day vitamin D, 3000mg/day vitamin C, Pepcid, Quercetin 500mg/day as an at-home remedy and even an on-going preventative, adding the Ivermectin and/or HCQ if the symptoms have already advanced or persist with the use of the other things. Dr. Michael Uphues at Caduceus Medical Partners locally is on the same page as Dr. McCullough and is able to prescribe Ivermectin and HCQ but 90% of people don't need either and recover well.

It is now clear and even **WHO admits that the virus was manipulated in the lab to become more than it would have normally**. He said it would have just been like a cold but they manipulated it to invade the body and attach itself. He also said that it is now clear that its introduction to the world was deliberate and orchestrated as was the creation of the “shot”. **Forcing it on the public has made pharmaceutical companies and their investors very wealthy, tripled Bill Gates’ wealth (who is a big population control guy so the deaths wouldn’t bother him) and made Fauci (a self-proclaimed globalist) a trillionaire**. So, wealth and **population reduction seem to be part of the focus** of this deliberate assault on the world. And of course, getting the media on board pushing the “shot” and faking all kinds of scary numbers that aren’t even true has helped keep the public in fear and living in anticipation of the next “booster”.

He is hoping that the public has had enough and simply refuses to comply with the mandates. He said that if the truth be known, 90% of those who have gotten Covid would have done better with their own immune system than with the “shot”. **The injection spikes the receiver’s protein on a continuous basis and they now know that it goes to the brain, heart, nervous system and endocrine system**. The body recognizes it as a foreign object and begins attacking it, in effect, the body actually attacking itself. The boosters will continue that process, continuing to weaken the individual’s own immune system and thus, problems like Parkinson’s Disease, auto-immune diseases, myocarditis, ovarian issues, etc.

He said you should **not take the “shot” nor the boosters** and if you have already done so, stop and take no more. He reminded us that the body is a remarkable thing and, depending on the damage done, may heal itself but it’s too early to know how much of the damage will be permanent.

He told several stories about people fired for not taking the “shot” and in some cases, they were called back and given an exemption, in some cases, they got better jobs, etc. The outcome isn’t always what you anticipate. In one case, the individual’s exemption was denied so he asked them who was the best person to receive the call from his attorney and 2 hours later they granted his exemption.

Dr. McCullough is hoping for some “spine” in the public because if everyone said no, this nightmare would end. He mentioned that even if the government

continued to shoot out mandates and the employers continued to issue exemptions, the employers would still be in compliance and a prolonged stand-off would provide a welcomed healing to this thing.
